Summary

Product manager and founder combining stakeholder discovery, workflow design, and technical implementation. Built Tamara's talent CRM with Greenhouse integrations and AI-assisted search; experience spans cross-team operations, partnership delivery, and award-winning voice AI.

Experience

Tamara – Fintech Riyadh, Saudi Arabia / Remote
Talent Brand & Partnerships Intern, then External Consultant Jun 2026 – Present

- Mapped COO, Talent Brand, Partnerships, and recruiting workflows; designed and built a **Greenhouse-integrated CRM** ingesting **700K+ applicant, prospect, and event-attendee records**.
- Unified intake, deduplication, shared candidate ownership, engagement histories, and follow-up tracking to coordinate sourcing and recruiting handoffs across teams.
- Built an **OpenAI search assistant** translating recruiter requests into deterministic filters, live counts, and shared views; added preview, confirmation, and audit controls for bulk ATS actions.
- Secured **7 partnerships** and added **500+ qualified early-career candidates** during summer 2026; led a national credit-risk competition with **SAR 100,000 in prizes**.

UC Berkeley – Sutardja Center for Entrepreneurship & Technology Berkeley, CA
Product Manager Sep 2025 – Present

- Built attribution across Google, Meta, LinkedIn, and organic channels for **$50K in ad spend**, translating campaign performance into budget allocation decisions.
- Built lead and email automations with **API integrations and LLM-powered personalization**, supporting enrollment across concurrent SCET programs.
- Worked across approximately **12 partnerships** on projects that received **$100K in payments**.

Operations Intern Jun 2025 – Dec 2025

- Standardized intern onboarding, training, and operational documentation; automated recurring administrative and coordination workflows.

AynX – Satellite Collision Avoidance (aynx.space) Berkeley, CA
Co-Founder Oct 2025 – Present

- Co-founded a platform translating a complex coordination problem into a workflow for low-Earth-orbit operators to avoid collisions without disclosing satellite ownership.
- Built rotating cryptographic identities for pseudonymous, verifiable conjunction-data sharing and an **ML-backed engine** to determine who maneuvers and when.
- Reached the finals of the Saudi Space Agency's global **DebriSolver** competition.

Projects & Awards

Sitters – 1st Place, Anthropic Hackathon Sep 2026

- Personally implemented a **Next.js, Claude, and ElevenLabs** app enabling museum visitors to point a camera at a painting and hold voice conversations with its sitter, painter, or both.
- Designed conversational personas separating sourced answers from labeled speculation, with a curator layer for context; demonstrated on Sargent's *Portrait of Madame X*.

SkipLab – 1st Place, AFI Global Idea Challenge ($7,000) Jan 2025 – Present

- Co-developed an AI platform to pre-screen cosmetic formulation safety; wrote the demo code and designed an ML workflow using peer-reviewed skin-sensitization and toxicology datasets.

Embersafe – Fire-Hazard Awareness

- Conducted customer discovery for fire-hazard awareness, built a tool around identified needs, and gathered feedback through public group demos.

Education

University of California, Berkeley Expected May 2027
B.S. Aerospace Engineering | GPA: 3.5/4.0

Skills

Technical: TypeScript, Next.js, Python, SQL, Prisma, OpenAI, Claude, ElevenLabs
Business & Analytics: HubSpot, Advanced Excel, workflow automation, attribution, partnership development
Languages: Arabic (native), English (fluent)
